

## Mini Indoor Cacti and Succulents

- [Lace aloe](#) (*Aloe aristata*) is named for its dark rosettes of foliage decorated with lacy white edges and spots. It reaches just 3 to 5 inches high and 6 inches wide.
- [Little Gator Aloe](#)<sup>™</sup> (*Aloe* 'Jimmy') is a very tiny variety that reaches just 3 to 5 inches. It has silvery foliage with white markings.
- [Feather cactus](#) (*Mammillaria plumosa*) is tiny (to 4 inches), round, and covered with feathery white plumes that are finger-friendly--no spines.
- [Easter lily sea urchin cactus](#) (*E. subdenudata* 'Dominos') is spectacular when it bears its white, 6-inch blooms in spring. The plant stays between 3 and 4 inches high and looks like a green, ribbed sea urchin with sparse tufts of white spines.
- [Thimble cactus](#) (*Mammillaria gracilis* var. *fragilis*). It creates a 2- to 4-inch high mound of many thimble-sized balls with few spines. In spring it bears many small ivory flowers.
- [Tom Thumb rosary vine](#) (*Crassula rupestris* ssp. *commutata* 'Tom Thumb') has short chains of succulent leaves that are bright green and edged in red. Expect it to reach between 6 to 8 inches.
- [Miniature spiral jade](#) (*Crassula* 'Estagno') has dense clusters of brilliant green leaves that spiral into beautiful patterns. The maximum height is just 3 to 5 inches.
- [Zebra plant](#) (*H. fasciata*) looks a bit like lace aloe, but it's coarser and stiffer. It has dark spiky leaves with knobby white stripes and reaches just 3 to 4 inches high and 4 to 6 inches wide.
- Star window plant ([Haworthia cuspidata](#)) and cathedral window plant ([Haworthia planifolia](#)) are both squat, fat-leaved, and have variable, translucent markings at their leaf tips. Both are slow-growing with rosettes that reach 3 to 5 inches.
- [Mini blue chalk sticks](#) (*Senecio serpens* 'Mini Blue') does spread, but slowly. It has slender, upright, dusty blue stems that reach 3 to 5 inches.
